Let's Start!

I need to file this information.

Learning Outcome:

Uses the four basic functions in persistent storage to create the system. Talks about the four basic functions for persistent storage.

Can Do Statements:

- I can describe what a database is.
- I can talk about different types of databases.
- I can talk about relational databases.

Ask your partner:

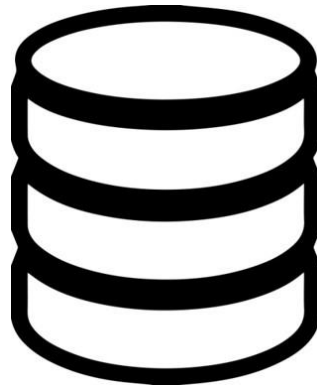

- Is it easier to have your information on paper or digital? Why?
- What do you think the pros of collecting your information in a computer are?

Let's Explore!

Josh is buying a database for his company. Which one did he choose?

Instructions: Read the text below.

Helen: Good evening sir and welcome to IT solutions, what can I do for you today?

Josh: Hi Helen, I'm looking for a software to keep control of the accountant and I logistic areas of my company through the web, something like a plugin for my web page.

Helen: Well, you've come to the right place. Tell me, what is your company about?

Josh: We're in charge of importing and exporting coffeemakers as well as supplies.

Helen: Okay, I see. In that case, you need to know we build software that will help your company by meeting all the requirements. In other words, we are going to provide you with a database.

Josh: A database?

Helen: Yes, it's a tool that permits you to collect and organize all the information in different servers.

Josh: So, are we going to have to pay more for that tool?

Helen: No. you aren't. You just have got to tell me the kind of data you need to manage.

Josh: Most of the data we have got to work with is the one that we generate from our customers as well as the goods we have or not in stock.

Helen: If that's the case, we can offer you the relational database, which is the most common one. It will display all the data in tables, and you can easily access to it as all the information is linked by key fields.

Josh: Now, you mention it, we've been using that tool for years, and our company has grown a little bit.

Helen: So, we have other types of databases. For instance, the operational database which is specially designed to keep track of products you have left in the inventory and information alike. Then, the distributed database which is used to share the data among branches.

Josh: I think I'll acquire the second one. I'm not going to have to use the third one yet.

**Let's Practice!**

Everyone talks about database!

Instructions: Use the words from the box to correctly complete the sentences.

going to explain / am organizing / keeps the
information / will invest / connect

1. Josh _____ in that software to keep control of the accountant and logistic areas of his company.
2. She is _____ the meaning of database in tomorrow's meeting.
3. I _____ the data of my company to have a better report for the next conference.
4. They will _____ the servers to share the database to the third parties and the executive department.
5. The company _____ by a system of operational database.

**Let's Practice!**

How are you going with relational database?

Instructions: Select the correct answer.

1. Josh _____ the database procedure with the relational type.
 - a. will start
 - b. are starting
 - c. start
 - d. is planning
2. She _____ all the data tables to explain the good storage procedure at the meeting.

Hint: It is related to conservation.

 - a. is going to
 - b. take
 - c. is going to take
 - d. is taken

Let's Practice!

3. She _____ the database collection for next Friday's report.
 - a. finishing
 - b. finish
 - c. finishes
 - d. have finished
4. Your company _____ with the accurate use of the relational database.
 - a. will grow
 - b. will be
 - c. will happen
 - d. will go
5. The database training is going well; I _____ with the related tables now.
 - a. am working
 - b. works
 - c. am speaking
 - d. organize

Extension Activity

Talking About Databases

Instructions: Complete the following steps. Fill in the Self-Assessment.

- a) Look for more information about databases.
- b) Make a comparative chart in which you talk about three types of databases.
- c) Describe all the characteristics of these three types.
- d) Share your chart with your instructor.

Self-Assessment

	Yes	No
1. I read about databases.	☐	☐
2. I make a comparative chart about three databases types.	☐	☐
3. I share my chart with my instructor.	☐	☐

Target Words

- **plug-in** (noun): an extension program/app for specific software
e.g. I'm looking for a software to keep control of the accountant and logistic areas of my company through the web, something like a plug-in for my web page.
- **acquire** (verb): to get/buy something
e.g. I'll acquire the second one.?
- **key fields** (noun): primary key: the identification factor of each record
e.g. You can easily access to it as all the information is linked by key fields.
- **alike** (adverb): in the same way
e.g. You have left in the inventory and information alike.
- **branch** (noun): a building of a company located in a different place
e.g. Then, the distributed database which is used to share the data among branches.
- **in stock** (adjective): available
e.g. Most of the data we have got to work with is the one that we generate from our customers as well as the goods we have or not in stock.

Learning Points

Will for Future

You can express future ideas with **will**.

Will is a modal verb that expresses future and, as a modal verb, it follows some rules.

There can't be 2 modal verbs together.

The verb that follows the modal verb goes in infinitive form without to.

You can use will to express ideas in the future that were not planed prior speaking, a spontaneous decision or to make a prediction.

To make an affirmative sentence using future with will, you can use the following structure:

Subject + will + verb in base form + complement

Examples:

*The company **will buy** some new software.*

*Josh **will implement** a new database in the company.*

Learning Points

Examples

- *You need to know we build software that will help your company by meeting all the requirements.*
- *It will display all the data in tables, and you can easily access to it.*

What is a database?

Databases organize the digital data a company or an individual may have.

A database is usually the way people and companies collect and record their data into computers or servers.

Depending on the nature of the company, there are many kinds of databases, each of them have a specific purpose, there are databases which functions are to merely organize data or to keep track of the number of goods left in the inventory.

In the following chart, you will see some of the most common databases.
