Let's Start!

Let's look up for more information about CRUD!

Create

Read

Update

Delete

Learning Outcome:

Uses the four basic functions in persistent storage to create the system. Talks about the four basic functions for persistent storage.

Ask your partner:

- Do you know how to structure a summary? Can you explain?
- Do you remember what the basics to program a database are?

Can Do Statements:

- I can understand written information about CRUD.
- I can answer questions related with CRUD.
- I can write a summary about CRUD characteristics and functions.

Let's Explore!

Julian is looking for information about CRUD in the FAQ* of an IT blog.

*"FAQ" stands for frequently asked questions. On websites, it is where you can find answers to common doubts.

Instructions: Read the text below.

If you are reading this section of the IT blog, it is because you haven't understood what CRUD stands for or what the proper use of it is. Thus, throughout this section, we will briefly explain to you what CRUD stands for and what it is by answering questions like "why are we using CRUD to create a database?", "how is CRUD improving storage?", and "are we working with the correct database?".

If you haven't worked with databases before, it will be a little difficult to understand what CRUD is. However, in short, we can tell you it is a mnemonic for the four basic functions of persistent storage, that is, Create, Read, Update and Delete. Even though CRUD hasn't included any further function, it will allow the user to manipulate information in any database by adding new data into it or to retrieve information that was previously stored, so that the user can manipulate it, update it, or dispose of it when necessary. Hence, we can say CRUD functions have improved storage since they have mapped SQL statements to make databases work safe and sound from possible threats.

Since we are working with SQL language, when we talk about CRUD, we can automatically relate it to stored procedures, which prevent hazards such as injection attacks that can either alter or delete our data. On the other hand, every time you work with databases, no matter what kind of database it is, you will always talk about CRUD functions which help to surf through the information that the user may require from the database.

If, by now, you haven't understood the basics of CRUD, you can always check out the video tutorial section where you are going to find thousands of useful videos.

**Let's Practice!**

You haven't talked about CRUD.

Instructions: Select the best options in the table. There is only one answer per sentence.

Clues	hasn't worked	haven't recognized	haven't understood	hasn't invested	haven't used
They _____ _____ the proper use of CRUD because they haven't followed instructions.					
I _____ _____ CRUD to create a database, but I'm learning how to do it.					
She _____ _____ with databases. That's why she called me for some assistance.					
You _____ _____ the CRUD functions and their importance to work here.					
The company _____ _____ in further CRUD functions because the actual ones fulfill their current needs.					

Let's Practice!

Instructions: Complete the sentences by writing its corresponding word. Use capital letter where necessary. Use: manner to create databases, are you mapping SQL, you including these functions, Is he working with, and she explaining to him.

1. _____ CRUD functions?
2. Are they learning the _____?
3. Are _____ in the platform of the project?
4. Is _____ the retrieve function?
5. How _____ statements? You're doing perfect!

Extension Activity

Writing and giving feedback about CRUD.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- a) Read about the characteristics and functions of CRUD.
- b) Write a summary about CRUD. Use your own words and paraphrase the information. Don't forget to use "quotation marks" to reference.
- c) Write five questions about CRUD and put them in a bag.
- d) Interchange questions with your classmates about CRUD in a dynamic way. Respond each other's questions and provide one another with feedback.

Self-Assessment

Yes

No

1. I read about CRUD characteristics and functions
2. I write a summary about CRUD
3. I ask about CRUD to my classmates
4. I practice my pronunciation with my classmates in a dynamic way

☐	☐
☐	☐
☐	☐
☐	☐

Target Words

- **thus** (adverb): with this result; therefore
e.g. Thus, throughout this section, we will briefly explain you what CRUD stands for.
- **mnemonic** (noun): a short word that summarizes several words
e.g. We can tell you it is a mnemonic for the four basic functions of persistent storage.
- **dispose of** (phrasal verb): to delete or remove
e.g. Update it or dispose of it.
- **map** (verb): to connect, match, or link elements in a set
e.g. CRUD functions have improved storage by mapping SQL statements to make databases work.
- **safe and sound** (idiom): secure and without threats; unharmed
e.g. Databases work safe and sound from possible threats.
- **hazard** (noun): a threat or danger
e.g. We can automatically relate it to stored procedures, which prevents hazards such as, injection attacks.

Learning Points

Present Perfect Negative Form

You use present perfect to talk about actions that took place or began in the past and that are related to the present time.

When you use the **negative** form of the **present perfect**, you want to say that some action that is somehow expected to happen in the present or in the future did not start or did not take place in the past or before the moment of speaking.

In order to make a negative statement with present perfect, you use the following structure:

subject + have/has + not + main verb (past participle) + complement

Example:

The IT engineer hasn't finished the database.

I haven't understood what CRUD is.

Notice that it is more common to contract the auxiliary have/has with the negative particle NOT rather than with the subject.

Learning Points

Subject	Negative form	Contraction
I	have not	haven't
You		
He	has not	hasn't
She		
It		
We	have not	haven't
They		

Examples

- *You haven't understood what CRUD stands for.*
- *You have not previously worked with databases.*

Present Continuous Interrogative Form

You can use the **present continuous** in its interrogative form to inquire about things that are happening at the moment of speaking.

People also refer to the **present continuous** as the present progressive. You can use this tense to describe ongoing actions, that means, actions that are taking place at the moment of speaking or actions that are temporarily in progress in the present time.

In order to make an interrogative statement using the **present continuous**, use the following structure:

(wh- question word) + to be + subject + main verb + ing + complement + ?

Example:

How are they programming the database?

Are you using CRUD functions to map the database?

Examples

- *Why are we using CRUD to create a database?*
- *How is CRUD improving storage?*
